Possesses business acumen and experience working in multicultural and cross-border teams, and brings especially skills in selling products and services that require explanation and perseverance. A strong analytical and goal-oriented approach to fit for any kind of team in the development process of innovative solutions.

MAJOR WEB DEVELOPMENT PROJECTS

MyFlix App <https://myflix-movies-client.netlify.app/>
A full-fledged full-stack web application. On the frontend with a beautiful responsive webpage with routing, rich interactions, several interface views, and a polished user experience. It was created with React and Redux for state management. On the backend a REST API will provide users with access to information about different movies, directors and genres. Users will be able to sign up, update their personal information, and create a list of their favorite movies. It was created with Node.js, Express and using modern API structure. A MongoDB database was created to store all the data.

Meet App <https://koola123.github.io/meet/>
It shows upcoming full-stack meetups around the world. A serverless, progressive web application (PWA) with React using a test-driven development (TDD) technique. The application uses the Google Calendar API and Serverless functions (AWS lambda) for the authorization server instead of using a traditional server to fetch the events.
